Scope and Deliverables

Use the onboard ADC of ESP32 to read 8 NTC inputs

Update and store that in a Register every 100ms Values Small Int (8 bit)

Send out with one CAN String every 500ms (8x 8-bit words)

Each Board:

Suitable ESP32 with Non-Volatile memory

Isolated DC/DC 12-24V input (EV running on 12V and out BESS systems on 24V)

CAN Transceiver

Connector Specification

16 Pin Connector for NTC termination	10142344-116KLF
4 Pin Connector In	10142344-104KLF

The temperature range will be -20-60°C, but we can later adapt it to the chips' wider spec.

NTC +-1% Accuracy

Deliverables

Gerber file for 1 Board

Bill of materials for board

Software to read Temperature values and update the Register

Send on CAN String x100h

Board Dimensions
